

Guest Type Labels — Expanded Persona Axis

A dedicated persona/behavior dimension operates alongside the existing value-tier × sentiment matrix.

- **Persona Axis:** Drives **personalization** (what to offer, how to phrase communications).
- **Value × Sentiment Matrix:** Drives **urgency** (who to prioritize operational resources for).

Separating these dimensions prevents collapsing operational context into overly broad composite tags (e.g., "high-taste"). A guest carries **one persona label** plus **one cell from the value × sentiment matrix**. For example, "*Frugal + Standard/Neutral*" follows a fundamentally different treatment path than "*Frugal + VIP/At-Risk*".

Persona Definitions & Operational Drivers

Persona Label	Behavioral Profile	Operational Strategy & Messaging
Frugal / Budget-conscious	Price-sensitive	Avoid direct upsell pushes; respond well to value-added bundles over premium add-ons.
Luxury / Experience-seeker	High willingness to pay	Receptive to upgrades, curated experience packages, and paying for exclusivity.
Business / Efficiency-focused	Prioritizes speed and predictability	Requires fast check-in, reliable Wi-Fi, quiet room

Persona Label	Behavioral Profile	Operational Strategy & Messaging
		placement; generally indifferent to leisure perks.
Family / Leisure	Group and schedule-sensitive	Prioritizes kid-friendly amenities, local activity recommendations, and flexible scheduling over rapid delivery.
Loyalist / Repeat guest	High lifetime value (LTV)	Responds strongly to personal recognition ("welcome back") and status acknowledgment rather than basic discounts.
Demanding / High-touch	High request frequency	Requires continuous proactive attention to prevent friction, regardless of baseline sentiment score.
Influencer / Review-risk	Public reach / Active reviewer	Flagged for elevated service recovery protocols driven by reputational risk alongside satisfaction scores.
Quiet / Low-maintenance	Low signal generator	Generates few explicit requests; flagged to prevent system oversight or unintentional neglect due to absence of signals.

Consolidated Front Desk Agent — Full Task List

A unified operational specification encompassing coordination, predictive analytics, ongoing management, guest segmentation, and voice capabilities.

1. Core Coordination

Base architecture functionality

- **Guest Intake & Check-in:** Streamlined requirement parsing and standard check-in execution.
- **VIP Priority Detection:** Instant flagging and elevated routing for high-value arrivals.
- **Incident Room Reassignment:** Dynamic room swaps and inventory management during maintenance or operational disruptions.
- **Operational Event Oversight:** General real-time guest experience monitoring during high-traffic events.

2. Predictive Intelligence

- **Surge Forecasting:** Predict check-in volume spikes using live booking patterns, flight telemetry, and local event schedules to optimize front-desk staffing allocation.
- **No-Show & Late-Arrival Modeling:** Probability modeling per reservation to guide dynamic overbooking decisions and late-room holds.
- **Pre-Arrival Friction Alerts:** Proactive flagging of potential dissatisfaction vectors before arrival by cross-referencing stated preferences with physical room attributes and historical stays.
- **In-Stay Happiness Scoring:** Continuous synthesis of persona and dynamic sentiment signals into a rolling satisfaction metric, predicting service recovery needs prior to checkout.

3. Ongoing Property Management

Continuous execution outside of incident triggers

- **Continuous Inventory Optimization:** Automated, property-wide room allocation optimization (upgrades, group block alignment, preference matching) beyond simple reactive reassignment.
- **Itinerary & Welcome Generation:** Automated synthesis of guest profile data into tailored pre-arrival itineraries and welcome packages.
- **Contextual Upsell Delivery:** Proactive queuing of targeted upsell options (late checkouts, dining bookings, spa treatments) aligned with guest persona and predicted affinity.
- **Omnichannel Sentiment Tracking:** Continuous tracking of guest sentiment across direct chat, concierge requests, and post-stay or in-stay reviews.

4. Guest Experience & Segmentation

- **Profile Maintenance:** Real-time updates to central guest profiles containing stay history, stated preferences, assigned persona label, and active sentiment scores.
- **Service Priority Matrix:** Maintenance of a dynamic, property-wide priority-of-service ranking across all active guests.
- **Automated Service Recovery:** Automated triggers for pre-emptive service recovery workflows whenever a guest's rolling happiness score drops into designated at-risk thresholds.
- **Tailored Offer Delivery:** Personalization of communication tone and promotional mechanics matched to persona (e.g., value bundles for Frugal vs. exclusive access for Luxury).

5. Voice-Native Capabilities

- **Ambient Multilingual Intent Parsing:** Capability at the desk to listen to natural, spoken guest interactions in any language and automatically parse and split complex multi-part requests into discrete, agent-routed work tasks.
- **Folio-Split Billing Engine:** Real-time parsing of multi-guest or complex corporate billing logic, interfacing with Revenue Agent modules for authoritative rate calculations, and generating individualized payment links on demand.
